

Zinoun Obaid

Creative and hands-on Mechanical Engineer with 8+ years of experience in aerospace and spacecraft engineering design, manufacturing, and compliance. Proven expertise in 3D modeling (SolidWorks), Design for Manufacturing (DFM), and Strategic Project Management. Strong in highly integrated system-level design, DO-160G certification, and cross-functional collaboration.

WORK EXPERIENCE

Dynamo Aviation

Senior Mechanical Engineer

April 2022 - Present

- Directed 10 aerospace product development cycles annually by leading subsystem integration (microwave, espresso, heater systems) for major OEMs and international airlines, ensuring on-time delivery and manufacturability.
- Validated 10+ years of legacy engineering data during EPDM vault migration, correcting CAD/model inconsistencies and safeguarding configuration control; concurrently led SolidWorks Manage implementation to streamline project coordination.
- Developed and delivered a structured mentorship program on advanced GD&T and DFM principles, improving junior engineer design accuracy and reducing review iterations.
- Executed DO-160G EMI/EMC and environmental qualification testing, identifying compliance gaps and ensuring system readiness for certification and customer acceptance.
- Redesigned ERP part-naming architecture, eliminating duplicate material numbers and improving planning workflows—saving an estimated 600 engineering hours annually across engineering and operations.
- Engineered and deployed a fuse/fuse-holder retrofit across 1,500 water-heater units, preventing field failures and avoiding \$1.65M in rework costs (92.7% savings).
- Redesigned EMI-filter safety bracket for a mandatory 200-unit upgrade, reducing manufacturing cost by 77.5% and delivering \$62K in savings.
- Act as the primary technical liaison for Sales and Quality teams, providing rapid feasibility assessments that improve procurement decisions and shorten response time to customers.
- Managed supplier coordination and material sourcing, identifying alternative materials and mitigating supply-chain risks for multiple product lines.
- Authored Manufacturing Instructions and SOPs that standardized assembly and integration processes, reducing variability and supporting consistent final build quality.

Element Materials Technology

Mechanical Engineer

December 2017 - April 2022

- Served as lead technical contact for the company's highest-revenue customer (>50% of total revenue), collaborating with engineers from Blue Origin and Howmet to define and validate mechanical testing requirements.
- Implemented automated production-planning workflows, increasing operational efficiency by 87% and reducing sample-handling time by 90% through redesigned procedures.
- Developed standardized label-identifier processes that improved first-pass reporting accuracy to over 93%, reducing corrective work and streamlining downstream operations.

EDUCATION

University of Pittsburgh

Bachelor of Science, Mechanical Engineering - Sum Laude

May 2016
